FlexApp is a sophisticated layering solution to support efficient desktop strategies to deliver applications on demand to users.

Insights

This organization evaluated and ultimately selected FlexApp over VMware AppVolumes and other layering solutions because it:

- Closely integrates with the ProfileUnity UEM solution
- Is easily set up and installed
- Is more scalable
- Works across all of its desktop platforms

The following types of applications are this organization's top layering targets:

- Utility
- Web Browser
- Office Productivity

The IT team rated FlexApp's features/value compared with competing products as follows:

- Speed and Ease of Packaging Applications: Excellent
- Application Compatibility: Excellent
- Ability to Reduce Desktop Complexity: Excellent
- Ability to Lower TCO: Excellent
- Support Services: Excellent

Use Case

Types of applications layered with FlexApp to date:

- Utility
- Web Browser

Results

The organization realized the following benefits by using FlexApp:

- The time and effort involved in packaging and delivering applications is reduced
- Packaging and delivering applications on-demand is simplified
