

## Take Time & Cost Out of POCs with Liquidware Hosted POC Services!

Most IT managers will agree – setting up POCs to trial desktop virtualization software products is challenging at best. First, you need to get permission to purchase expensive and set up the test environment. Then there is the time and effort to evaluate options and install all the necessary components which can take weeks. If you run into a roadblock, you can never be sure if it's a glitch in the product or in the environment. Frustrating!!

What if you could dramatically shorten the time to conduct your POC with access to a fully configured, stable and isolated environment? Instead of purchasing and setting up your environment, you can spend your time drilling down and using advanced features and maybe even learn a few things you never knew about your desktops? And wouldn't it be nice if you could tap into some expert guidance, especially as you are navigating through uncharted territory?

Liquidware Hosted POC services will allow you to bypass all of the headaches of setting up an environment just to test out our industry-leading products.

So save yourself the hassle of setting up POC environments and waiting to uncover the full benefits that Liquidware solutions can bring to your desktop environment today!

### Hosted POC Benefits

Fast-track through a POC with these advantages:

- Site is fully configured, tested, isolated and available today – no waiting.
- You can bring over all configurations and learnings from the hosted POC to your on-site POC, reducing the time it takes to get through this stage in your own environment.
- Liquidware Hosted POC is FREE to serious evaluators who want to get hands-on with our products to understand their value.
- You can fully test out the entire rich, advanced feature sets in our solutions to get the full impact of how they can advance your desktop environments.
- Get expert guidance as you move through the POC – your questions can be answered on the spot by knowledgeable Liquidware staff.
- You start the Hosted POC on day 1, with no special tools or other software needed.
- Easily test out how our solutions “play” with other solutions or platforms you have already installed or plan to install.
