Liquidware FlexApp
Unleashing Application Compatibility with Micro-isolation Technology

Every organization should strive to deliver applications that seamlessly adapt to any environment, from modern digital workspaces to older Windows® OS versions. Liquidware FlexApp™ has rewritten the rules with revolutionary micro-isolation technology, shattering the limitations of traditional solutions and unlocking true application freedom.
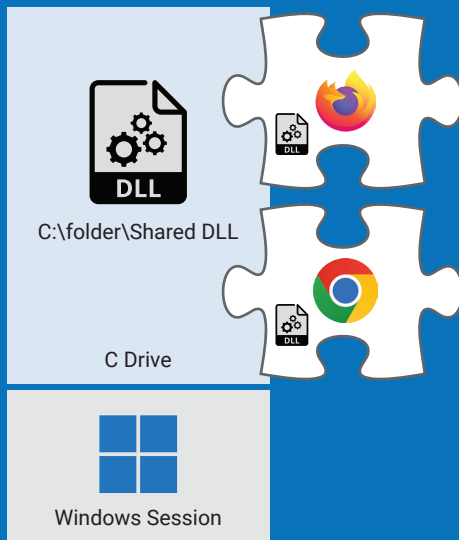

The Compatibility Conundrum

Modern work demands agility. Users juggle diverse endpoints, navigate evolving operating systems, and expect seamless access to the apps they need to be productive. Yet, many application delivery solutions stumble to provide a fast and easy packaging of apps without conflicts.

Challenges Include:

- **File & Registry Clashes:** Conflicting resources trigger crashes and erratic behavior.
- **OS Version Lockout:** Applications tied to specific builds falter on earlier or later versions, demanding constant repackaging.
- **Management Complexities:** Maintaining compatibility across versions grows complex and drains resources.

Breaking Free with Micro-isolation

FlexApp introduces a paradigm shift. Its groundbreaking micro-isolation technology transcends mere isolation, dynamically resolving conflicts on the fly, even after packaging. Think of it as an invisible traffic cop, automatically and seamlessly redirecting file and registry conflicts.

C:\folder\Shared DLL

C Drive

Windows Session

Micro-isolation in Action:

1 Transparent Redirection: FlexApp automatically resolves file and registry requests when conflicts occur.

2 Conflict Detection: Advanced algorithms sniff out potential clashes with other apps or the underlying OS.

3 Dynamic Resolution: FlexApp seamlessly reroutes conflicting requests, ensuring smooth operation irrespective of shared resources.

The Benefits of Application Freedom

- **Unmatched Compatibility:** FlexApp boasts the industry's highest success rate, ensuring applications work flawlessly across your entire Windows ecosystem, from desktops to servers.
- **Simplified Packaging:** Micro-isolation heads off file and registry conflicts in real-time, eliminating strict grouping and ordering of apps.
- **Management Streamlined:** Manage your application portfolio with unprecedented ease and efficiency.
- **Agility Unleashed:** Deploy and update applications with confidence, knowing they'll thrive in any environment.
- **Digital Employee Experience (DEX):** Deliver consistent, reliable performance for your users, regardless of their workspace.

FlexApp: More Than Just Micro-isolation

Micro-Isolation is just one of FlexApp's powerful features. This comprehensive solution unlocks a world of possibilities:

- **Effortless Packaging:** Convert applications into FlexApp containers with minimal effort.

- **Microsoft Entra ID Support:** Microsoft Entra ID security integrates with FlexApp One, bolstering your cloud workspace security.

- **Offline Access:** Work productively with applications even when disconnected from the network.

- **Seamless Integration:** FlexApp supports all the leading management tools and platforms.

Embrace the App Revolution

Liquidware FlexApp empowers you to break free from the limitations of traditional application delivery. With micro-isolation technology, you can simplify management, enhance agility, and deliver a superior user experience across any workspace.
